Entry Description

This lite case has up to four times the rigidity of standard injection molded parts and dramatically reduces transportation costs. Built to withstand the harsh tour circuit environment, hostile material handling equipment and broad temperature swings the assembly can be customized. Unique ribbing system permits the creation of many individual compartments.

Why is this Part Innovative?

It replaces currently used plywood cases. It can be shipped in its knockdown version and easily assembled on site. Far lower cost than the plywood version. Easily replaceable damaged component.
