Entry Description

An automatic pet feeding device designed to ease the problems of pet owners whose busy schedules don't always allow them to be home to feed their pets. It is self-contained and holds up to 2 weeks of food. It drops the food using an amount into a bowl and it can be set to drop the amount of food the consumer wants at the exact time he wants the pet fed. .

Why is this Part Innovative?

There is nothing available to the pet owner to drop a pre-determined amount of food at the time he wants. Such control is imperative to the health of the pet. Over half the dogs in the US are overweight.
